WORK EXPERIENCE

Compute Labs, Remote, Redmond, WA

- Co-Founder and Chief Technology Officer Aug 2024 – Present
 - **Leading technological innovation and strategic vision for democratizing compute infrastructure access through blockchain-based solutions, building financial ecosystem for emerging digital asset markets.**
 - Architecting tokenization protocols that transform physical computing hardware into tradeable digital assets, enabling fractional ownership and enhanced liquidity in infrastructure investments.
 - Directing R&D teams in developing fintech ecosystem that merges infrastructure with blockchain protocols, creating innovative financial instruments and structured products.
 - Spearheading development of token systems, implementing validation and benchmarking frameworks to ensure transparent, verifiable, and secure transactions.
 - Building scalable distributed infrastructure to optimize hardware utilization across decentralized and centralized networks, maximizing operational efficiency and investor returns.

Amazon Web Service – Athena, Redmond, WA

- Senior Software Engineer - Data Infrastructure Apr 2022 – Jun 2024
 - **Building next-generation data infrastructure for large-scale analytics applications, enabling high-performance processing on petabyte-scale datasets.**
 - **Tech Stack: Java, Python, Apache Spark, Apache Iceberg, AWS Services, Distributed Computing**
 - Architected CTAS feature for Iceberg Tables enabling efficient data processing workflows. Released at AWS RE:INVENT 2022 with millions of queries executed since launch.
 - Optimized Hive JSON Serde library for data ingestion, improving query performance by 30% and reducing processing failures by 60%.
 - Developed virtualized table connector for data access platforms, improving application data accessibility by 40% and projected to save \$4M annually in infrastructure costs.

Apple, Cupertino, CA

- Software Engineer - Siri Platform Aug 2020 – Apr 2022
 - **Developing software systems and data processing frameworks to enhance Siri's functionality across iOS, macOS, watchOS, and tvOS platforms.**
 - **Tech Stack: Python, Objective-C, Data Processing Libraries, Apache Spark, Real-time Systems**
 - Designed on-device framework for user preference analysis using statistical algorithms, serving as data layer for Apple Maps and Apple News recommendation systems.
 - Built automated data processing pipeline for continuous system updates with A/B testing framework and performance monitoring, reducing manual engineering overhead by 40%.
 - Developed contextual prediction service using statistical methods to anticipate user patterns, powering Siri Shortcuts and proactive features.

Airbnb, San Francisco, CA

- Software Engineer - Trust & Safety Jan 2019 – Aug 2020
 - **Building fraud detection and trust & safety systems using advanced data analysis techniques and real-time processing engines.**
 - **Tech Stack: Python, Java, Scala, Data Analysis Libraries, Apache Kafka, Real-time Systems**
 - Developed algorithms for fake review detection using statistical analysis and pattern recognition, reducing fraudulent reviews to 1% of peak volume and preventing \$2M in losses.
 - Implemented comprehensive user risk scoring system, combining multiple analytical models to evaluate host and guest trustworthiness.
 - Deployed automated policy engine for risk-based payout management, preventing 60% of fraudulent payouts and generating \$10M in annual savings.
 - Architected real-time data processing infrastructure providing low-latency risk signals through Kafka streams and Redis caching for sub-100ms response.

EDUCATION

Carleton College, Northfield, Minnesota

- B.A. in Computer Science Graduated Jun 2018

TECHNICAL SKILLS

- Programming Languages: Proficiency in Python, Java, Golang, Javascript, Scala, Objective-C
- Experienced AWS Services: Athena, S3, SQS, EC2, Lambda, API Gateway, Auto Scaling Group, Cloudfront, Route 53, CodePipeline, CodeBuild, CodeDeploy, Kinesis
